GBX Financial - Standalone Installation

Package Version	Document Date
15.7.0.69	March, 2024

For those clients who prefer not to launch GBX Financial through Java WebStart, BGC Group provides standalone Windows installation. Installation is done by running executable file **gbx-financial-setup-.exe**, which sets up either GBX Credit or GBX Rates software onto the desktop.

Installation procedure

Installation procedure provides series of screens where user selects desired options. Each screen may contain buttons "Next >" and "< Back" which allows to move to next or previous screen. At any time user may exit installation by pressing "Cancel" button. Screen title contains version of the current Installer.

"Welcome" screen

This is information screen which indicates that installation process started.

"Installation Type" screen

This provides a list of pre-configured environments to use GBX Financial with. Typically, clients connect to production server for normal business process. Depending on the market flavor select either "PROD - GBX Rates" or "PROD - GBX Credit" option to configure application for such use.

Clients who want to participate in UAT testing of future version should select one of the "UAT - Staging" options. In this case application will be configured to connect to UAT, or "Staging", server.

"Information" screen

GBV Setup - GBX Financial 15.7.0.69	_		×
Information Please read the following important information before continuing.			
When you are ready to continue with Setup, click Next.			
If application is being reinstalled, settings may not be taken into effect. They values from connection.properties file which can be found under us settings location directory. For example: C:\Users\jsmith\GBX\GBX\gbx\connection.properties. This first run of eTrading. Installer is not aware of exact location of connection.properties file.	ser logs a	and	ľ
< Back	Next >	Ca	ancel

GBX Financial launcher allows to override connection settings

At the end of setup Installer saves connection settings in a presumably read-only ***.vmoptions** file. GBX Financial launcher allows to override those settings but keeps them in writable ***connection.properties** file. Since the Installer is unaware of this file, ***connection.properties** remains unchanged between re-installations. This can be confusing for the user, since she expects to see installation settings. If so, please delete ***connection.properties**.

"Installation Completed" screen

This is final screen informing that installation was done.

Launching GBX Financial

GBX Financial Launcher will show as a program in "GBX Financial" group of the Windows Start menu

snip

Updating bundled JRE

GBX Financial is a java application and requires **Java Runtime Environment (JRE)** present to run. The GBX Financial installer automatically deploys bundled JRE. The JRE can be found under **<installation directory>\jre** directory. Note, that other applications will not be able to use such a JRE.

		F	👿 uninstall.exe		9/27/2023 17:21	Application	367 KB

It is possible to manually update bundled JRE after installation. This can be done using any of the following ways.

Replace bundled JRE directory contents

It requires to replace the contents of <installation directory>\jre directory with another JRE.

PROS: This JRE version is available only to the GBX Financial launcher. Other existing JRE's on the system are fully masked.

Delete bundled JRE directory

It requires to delete the **<installation directory>\jre** directory completely. This assumes presence of another JRE on the system. Upon GBX Financial launcher startup JRE's will be searched in the following order:

- 1. Windows registry and standard locations.
- 2. Environment variable JAVA_HOME.
- 3. Environment variable JDK_HOME.

If no JRE was found, the GBX Financial launcher fails to start.

PROS: This allows to update JRE in a central way for all java applications.
